Hints, Tips & Protocols

Upon receiving your ezy-ride e-bike, please read these 'Hints, Tips & Protocols' before you commence exploring our beautiful region.

1) **Wear a bright coloured top, put your riding helmet on**

and ensure the e-bike is in 1st gear

2) Turn on rear light (right rear fork, front light will not work without bike in 'e' mode)

Press & hold tiny button at the top for 3-4sec, press once more for strobe light

3) Go for a short ride, riding your e-bike like a p-bike

4) While pedaling click through all the gears up and down

Right bar grip

Easier to Pedal
 Push away from you
 one click at a time

Indicator gear position

Front brake lever

Harder to Pedal
 Push in one click at a time

5) We suggest using Front & Rear brakes at the same time when braking

6) Now stop the bike and push and hold the 'M' button for 3-4 sec to energise the system, remember **nothing will happen until you begin pedaling**

Left bar grip

Rear brake lever

- = power assist decrease

Horn

Screen
 Power Assist Level
 Battery Level

+ = power assist increase

M = On - Push and hold 3-4sec
 Off - Push and hold 3-4sec

7) Ensure the power e-assist indicator displays **'low'**

- 8) Turn on front light by holding in the '+ button' for 3-4 sec
- 9) Begin to pedal and after 3-5sec the e-assist will engage
- 10) The e-assist will only engage while you are pedaling
- 11) Change up gears until your pedal speed matches the e-assist speed
- 12) Generally, the more e-assist, the higher the gear required
- 13) Stay as far to the left of your side of the road as possible
- 14) Always e-ride single file
- 15) Signal which way you are turning
- 16) Use the horn/bell for going past pedestrians, other bikes and motor vehicles
- 17) Alcohol consumption rules apply to e-bikes,
so do not e-ride while over the PCA limit
- 18) To disengage e-assist, stop pedaling and/or apply the brakes
- 19) We recommend front and rear brakes be applied at the same time
- 20) Especially not just the front brake (right bar grip) by itself
- 21) When leaving the e-bike, turn off rear light. The front light will turn off when you turn the bike off by holding the 'M' button for 3-4sec (see pg.1)

Press & hold tiny button at the top for 3-4sec

- 22) Always lock the e-bike in a shady area away from direct sunlight if leaving it to go into a shop/winery etc, it is best to secure your e-bike to an immovable object such as a post A), if this is not available secure the wheel to the frame B)

A)

Best recommended

B)

Ok
If no option

- 23) Keep your key & helmet with you at all times when away from the e-bike
- 24) Place your key in the Mb phone case and close when riding your e-bike

Please have a great day and thank you hiring from 'Ezyride Mudgee' and for ezy...ing the strain on the environment.
